

Amendments to the Specification

In the specification, Applicant has amended paragraph 0062, which will replace the prior version of paragraph 0062 in the application.

[0062] In other embodiments, the line driver 600 shown in FIG. 6 can be a cell in an array of cells that make up a larger line driver 700, as shown in FIG. 7. Each line driver cell 600 can have the loopback protection FETs (e.g. 506, 502, 508, and 504) as shown in FIG. 6. Alternatively, line driver 300 shown in FIG. 3 can be a cell in an array of cells that make up a larger line driver 800, as shown in FIG. 8. [[s]]Since the cells 300 are arrayed in parallel, only one set of loopback protection FETs, shown in FIG. 8 as loopback prevention circuit 810, can be connected to the appropriate FETs in the multiple cells 300.
